

1Çatı — Germany & Turkey

What does a system like 1Çatı really cost in 2026? Transparent license and development costs — including an honest explanation of external interfaces and third-party costs.

As of July 2026 · Prepared for WAMOCN GmbH / Ataberk Estate · **STRICTLY CONFIDENTIAL**

1 Executive summary

The property-management software market splits into three classes. 1Çatı belongs functionally to the top one — yet delivers this enterprise depth at the price of a lean service subscription, plannable via price guarantee and available immediately.

1ÇATI AS A SERVICE	CUSTOM BUILD GERMANY	CUSTOM BUILD TURKEY	ENTERPRISE SOFTWARE DE
€5 / user ≈ €10 / unit, all-in	€150–400k 5-yr TCO + 15–25 %/yr maintenance	>4.5M ₺ ≈ \$100–250k enterprise system	Black box Aareon, iX-Haus, DOMUS: on request

The cheap standard tools (Apsiyon etc.) are not functionally comparable — they cover dues/payment, not finance ledger, workforce/SLA, AI and multilingualism. 1Çatı delivers enterprise class as a transparent OpEx subscription instead of a six-figure CapEx project.

2 Method & transparency

All figures come from publicly available vendor, comparison or market sources (as of July 2026); sources in section 8. Where leading vendors publish no list prices ("on request"), that is itself a documented finding. No figures are invented.

3 Market Germany 2026

3.1 Transparent SaaS (small/mid managers)

VENDOR	METRIC	PRICE
Casavi	Metric	€219 / €329 / €599 /Mon
Objego	Metric	€7,95 + €0,95/E.
Immoware24	Metric	~€2,50/E.
immocloud / VermietenPlus	Metric	€9,99 / €9,90+€0,99
iDWELL / SCALARA / SMARTBRIX	Metric	€99 / €199 / €350

3.2 Enterprise ERP — the functionally comparable class

Aareon (Wodis Yuneo, RELion ONE), CREM iX-Haus, Haufe/DOMUS ERP, FIO: no public prices — all "individual quote". DOMUS indicatively from €2,100 license + €42/mo maintenance. These match 1Çatı's function class — opaque, typically four- to five-figure p.a.

3.3 Custom development 2026

Custom software €20,000–250,000; tailored ERP €50,000–300,000+, complete industry software ~€150,000, 5-year TCO €150,000–400,000. 1Çatı's scope: €120,000–300,000+ initial build.

4 Market Turkey 2026

4.1 Dues/site tools (per unit)

VENDOR	METRIC	PRICE
Marktband	Metric	5–30 ₺/E.
Apsiyon	Metric	~2,80 ₺/E. · ~803 ₺ min · ~5 %
YÖNETİCİ	Metric	700 / 1.100 / 1.400 ₺
Komşum / Net Yönetim / Vayonet	Metric	0 ₺

4.2 Classic ERP & service

Logo Netsis 3 Standard (Jan 2025): 1 user 83,000 ₺, +5 users 402,600 ₺, +10 users 775,900 ₺ — perpetual license + LEM, generic ERP without real-estate domain. Human management: 100–250 ₺/unit/month.

4.3 Custom development 2026

Custom software 300,000 ₺ (simple) to 4.5M ₺+ (complex); developer rates 1,000–3,000 ₺/hr or \$24–54/hr. A Turkish rebuild of 1Çatı's breadth: >4.5M ₺ / ~\$100,000–250,000+.

5 Feature & technology comparison

1Çatı is not a dues tool but a full real-estate ERP. Only then is the cost comparison fair.

MODULE / CAPABILITY	1ÇATI	DUES TOOLS	CLASSIC ERP	ENTERPRISE DE
Object/unit model	full	basic	no	full
Finance ledger (posting integrity)	full	no	full	full
Payments / deposits / reconciliation	full	collection	partial	full
Service tickets & orders	full	basic	no	full
Workforce / SLA / field proof	full	no	no	partial
AI assistant / analytics	full	no	no	add-on
Multi-role RBAC/RLS	full	basic	partial	full
4 languages (tr/en/de/ru)	full	TR only	TR only	DE/EN
Price transparency	published	on request	price list	black box

Only the enterprise ERPs (DE) reach 1Çatı's breadth — but they are opaquely priced and without 4-language/AI focus. 1Çatı unites enterprise breadth + price transparency + multilingualism + AI.

6 External interfaces & third-party costs — explained transparently

1Çatı is the platform. Some functions connect to external systems that incur their own costs at third parties. We explain this with full transparency: you always know what you pay to whom — no hidden markups.

A • Included in the 1Çatı fixed price

Software, operation/hosting, updates, maintenance, support, base AI and all property-management modules. One fixed price, no surprises.

B • Pass-through third-party costs (usage-based, no markup)

Real third-party costs that only arise on use and which we pass on 1:1 at documented cost — or which you bear directly with the provider. Transparent on every invoice, no WAMOCON markup.

C • Optional add-on systems (own contract, separate)

Standalone systems outside property management with their own hardware/contracts. Connected on request and calculated separately — marked "to be defined" in the offer.

Overview of interfaces

INTERFACE	CATEGORY	TYPICAL COST	WHO PAYS / BILLING
Payment system (iyzico/PayTR)	B	~2.9–4.29 % + fixed per payment	pass-through / payer, no markup
SMS / OTP (Netgsm)	B	per SMS (cents)	pass-through at cost
e-Invoice (licensed integrator)	B	document quotas	pass-through; regulated TR integrator
AI assistant (tokens)	A/B	base incl.; heavy use capped	fair-use / transparent
Access/security system (camera/barrier)	C	hardware + vendor API (quote)	own contract, separate
Payroll & HR system	C	separate subscription / service	own contract, separate
Sales system (real-estate CRM)	C	separate subscription	own contract, separate
Booking system (rental / rooms)	C	subscription + booking commission	own contract, separate
Cloud / storage / maps	B	usage-based (low)	included in operation up to threshold

The principle is simple. The software is included in the fixed price. Ongoing usage — payment fees, SMS — is billed transparently by actual use and without any markup. Standalone add-on systems such as access and security, payroll, sales or booking are connected only when needed and billed separately.

Our promise: no hidden markup. Category A is your fixed price, category B we pass through at documented cost, category C is optional and calculated separately in advance. This clean separation is lived German transparency.

7 Economics — the most sensible choice

The fair comparison is build-vs-buy at enterprise level — not the monthly price of a dues tool.

OPTION	WHAT IT COSTS	INCLUDED	TIME-TO-VALUE / RISK
1Çatı (service, 3 yrs)	€5/user, all-in + guarantee	Software+hosting+updates+support+AI	live immediately · no build risk
Custom build Germany	€150,000–400,000 + maintenance	software only	6–18 months · high risk
Custom build Turkey	>4.5M ₺ / ~\$100–250k	software only	6–18 months · risk
Enterprise software DE	"on request" (4–5 figures p.a.)	software+support	rollout project · opaque

A system of 1Çatı's class as a custom build costs €150,000+ / >4.5M ₺ just to build, plus years of maintenance, plus 6–18 months' wait, plus risk. 1Çatı delivers the same class as a plannable subscription, immediate, all-inclusive, with a 3-year price guarantee.

8 Conclusion

1Çatı is (a) technologically the most comprehensive solution — combining domain depth, accounting rigor, workforce/SLA, AI and a 4-language buyer/tenant portal — and (b) economically the most sensible: enterprise class at a service price, transparent, plannable via price guarantee. For a developer like Ataberk: maximum function, minimum risk, plannable cost.
